

Would you like to view the positioning of dataloggers, repeaters and gateways on maps, floor plans and cartographies? We have good news for you.

[Capetti Elettronica](#) launches the "Service Center Plus" option which allows each enabled account to create, view and modify the positioning of the [WineCap™](#) devices within maps, floor plans or maps properly loaded on the portal.

By simply passing over the icon with the mouse, the names and addresses of the probes are highlighted: by clicking on the individual units, on the other hand, interactive windows are opened - within the maps which show the last recorded data and the last update. Is it a service that interests you?
